

Helping Communities Move From Active Work To Aligned Impact.

D.O.G.S. Ecosystem Alignment Model

D.O.G.S. are the structural friction points within a community ecosystem that limit the translation of active work into **coordinated, measurable impact.**

Where D.O.G.S. Show Up

- 1 Duplications** → Multiple organizations delivering similar services without coordination
- 2 Overlaps** → Unclear roles and responsibilities creating inefficiencies
- 3 Gaps** → Unmet needs despite active programming
- 4 Silos** → Organizations operating in parallel without meaningful connection

Reduced Duplication

Clearer Roles

Service Gaps Filled

Stronger Coordination

Sustained Impact

MWoV serves as a coordinating infrastructure layer across community ecosystems.
